

WELCOME TO II SIGAC!

May 8-11, 2018

R. Abdias Gomes de Almeida, 800 - Tambauzinho,
João Pessoa , Paraíba State, Brazil. 58042-900

About

Brazil has a number of biological, paleontological and genetic resources collections in several research institutes and universities. Although these collections collectively cover a significant range of the country's biodiversity, recognition, the adequacy of maintenance conditions and their storage are still more dependent on the individual effort of each curator than on the support of the institutions that house the collections.

With the II INTERNATIONAL SEMINAR ON MANAGEMENT OF SCIENTIFIC COLLECTIONS, JOÃO PESSOA BRAZIL, professionals from Brazil and abroad will have the opportunity to promote the exchange of scientific and technological experiences, as well as the training, updating and awakening of interests in professionals and students. As the event is programmed lectures, evaluation of the status of the collections, workshops and short courses, various modalities of interactions between participants are planned
